Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 2/26/2007 has been entered.

Response to Amendment

Amendment, filed on 1/30/2007 has been considered and entered.

Claims 6 & 7 have been amended, and claim 9 is canceled.

Currently claims 1-8 are pending.

Drawings

Figure 4 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

Claims 3 & 5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claims 3 & 5, the phrase "such as" renders the claim indefinite because it is unclear whether the limitations following the phrase are part of the claimed invention. See MPEP § 2173.05(d).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-8 are rejected under 35 U.S.C. 102(a) as being anticipated by Applicant's Admitted prior art (AAPA).

Regarding claim 1, AAPA discloses an organic EL display device (see Fig 1 & Fig 2E) formed of a glass substrate (101) including an ITO strip (102) a counter electrode (103) an organic EL layer (104) and a cathode strip (105) adhered to a seal cover (109) by using a sealant (108), wherein the counter electrode is formed in a grid form (in this case divided in thin layers, see paragraph 19) at the crossing point between the counter electrode and the sealant (shown in prior art Fig 4).

Regarding claim 2, AAPA discloses that removed portion forming a grid in the counter electrode is in the form of polygon (Fig 4 and paragraph 19).

Regarding claim 3, AAPA discloses that the counter electrode (103) is formed of Mo and Cr (Paragraph 12).

Regarding claim 4, AAPA discloses that the insulating layer 106 is expanded to meet the crossing point of counter electrode and the sealant and to an area of glass substrate so as to be formed on a periphery of the organic layer 104 (see Fig 1)

Regarding claim 5, AAPA discloses that the cathode strip is formed of Mg-Ag alloy and aluminum (Paragraph 14).

Regarding claim 6, AAPA discloses a method of fabricating an organic EL display device (see Fig 2B) comprising forming an ITO strip (102, 102A) on a glass substrate (101), forming a counter strip (103) on the ITO strip (102A) located in regions other than an emitting region (see Fig 2B) patterning in the counter strip is in a grid form (see Fig 2b, 2C, 2D, paragraph 19) having plurality of holes, forming a first insulating layer (106 of Fig 2C) on the glass substrate having ITO strip, forming barrier ribs (107) on the insulating layer (106, see Fig 2D); forming an EL layer (104) and a cathode strip (105, see Fig 2F); and adhering seal cover (109) to the glass substrate (see Fig 2F).

Regarding claim 7, AAPA discloses that that the counter strip (103) has a width smaller than that of ITO strip (see paragraph 8).

Regarding claim 8, AAPA discloses that the plurality of holes includes polygons (see Fig 2B-2D).
